

- Designed and developed a SQL programming project involves the creation of database host application that interfaces with a backend SQL database implementing a Library Management System.
- Users of the system are librarians (not book borrowers).
- Software Used
 - Eclipse JEE 2018-12
- Required Libraries
 - - Apache Tomcat Server 9.0
 - - JRE System Library
 - - Mysql-connector-java-8.0.15.jar
- For back-end (data related)
 - - MySQL 8.0.15

Compilation:

- Run the SQL scripts to create and insert data for the tables and execute the sps.
- You will be asked to enter the username and password for connecting to the SQL server on your system and change the password in "Connection.java".
- Once the database has been loaded, run the "Home.html" to start the Library manager
